

Ini 2 file auth_service.dart dan file php dr login.php ngga terakses justru yg jadi kendala connection time out, padahal ip hp dan laptop sama

1.auth_service.dart

```
import 'dart:convert';
import 'package:http/http.dart' as http;
import 'package:logger/logger.dart';
import '../models/user_model.dart';

class AuthService {
  static const String _baseUrl = 'http://10.0.171.8/api/login.php';
  final Logger _logger = Logger();

  Future<User> login(String email, String password) async {
    _logger.i('[AuthService] Login request:');
    _logger.d('URL: ${_baseUrl}login.php');
    _logger.d('Headers: ${{'Content-Type': 'application/json'}}');
    _logger.d('Body: ${json.encode({
      'action': 'login',
      'email': email,
      'password': password,
    })}');

    try {
      final response = await http.post(
        Uri.parse('${_baseUrl}login.php'),
        headers: {'Content-Type': 'application/json'},
        body: json.encode({
          'action': 'login',
          'email': email,
          'password': password,
        }),
      );
      _logger.i(
        '[AuthService] Login response: ${response.statusCode} ${response.body}');

      if (response.statusCode == 200) {
        final data = json.decode(response.body);
        _logger.d('[AuthService] Parsed user data: $data');
        return User.fromJson(data);
      } else {
        _logger.e('[AuthService] Login failed: ${response.body}');
        throw Exception(json.decode(response.body)['message']);
      }
    } catch (e) {
      _logger.e('[AuthService] Exception during login: $e');
      rethrow;
    }
  }
}
```

```

Future<User> register(String name, String email, String password) async {
  _logger.i('[AuthService] Register request:');
  _logger.d('URL: ${_baseUrl}models/user.php');
  _logger.d('Headers: ${{'Content-Type': 'application/json'}}');
  _logger.d('Body: ${json.encode({
    'action': 'register',
    'name': name,
    'email': email,
    'password': password,
  })}');

  try {
    final response = await http.post(
      Uri.parse('${_baseUrl}models/user.php'),
      headers: {'Content-Type': 'application/json'},
      body: json.encode({
        'action': 'register',
        'name': name,
        'email': email,
        'password': password,
      }),
    );
    _logger.i(
      '[AuthService] Register response: ${response.statusCode}
      ${response.body}');

    if (response.statusCode == 201) {
      return login(email, password);
    } else {
      _logger.e('[AuthService] Register failed: ${response.body}');
      throw Exception(json.decode(response.body)['message']);
    }
  } catch (e) {
    _logger.e('[AuthService] Exception during register: $e');
    rethrow;
  }
}

```

2.login.php

```

<?php
$email = $data['email'] ?? '';
$password = $data['password'] ?? '';

if (empty($email) || empty($password)) {
  echo json_encode(['status' => 'error', 'message' => 'Email and password are
  required']);
  exit;
}

```

```

}

try {
    $stmt = $pdo->prepare("SELECT * FROM users WHERE email = :email");
    $stmt->execute(['email' => $email]);
    $user = $stmt->fetch();

    if ($user && password_verify($password, $user['password'])) {
        $response = [
            'status' => 'success',
            'message' => 'Login successful',
            'user' => [
                'id' => $user['id'],
                'name' => $user['name'],
                'email' => $user['email']
            ]
        ];
    } else {
        $response = ['status' => 'error', 'message' => 'Invalid email or
password'];
    }

    echo json_encode($response);
} catch (PDOException $e) {
    echo json_encode(['status' => 'error', 'message' => 'Database error: ' . $e-
>getMessage()]);
}

```
